FUNCTION: PHOSPHORYLATES TWO ADJACENT THRECONINE RESIDUES, THR-57

AND THR-59, IN THE N-TERMINUS OF EUKARYOTIC ELONGATION FACTOR-2.

BINDS CALMODULIN (BY SIMILARITY).

ENZYME REGULATION: UNDERGOES CALCIUM/CALMODULIN-DEPENDENT

INTRAMOLECULAR AUTOPHOSPHORYLATION, AND THIS RESULTS IN IT

BECOMING PARTIALLY CALCIUM/CALMODULIN-INDEPENDENT (BY SIMILARITY).

SUBUNIT: MONOMER OR HOMODIMER (POTENTIAL).

SUBUNIT: MONOMER OR HOMODIMER (POTENTIAL).

STAFERNATIVE PRODUCTS: Z ISOFORMS; EFK 1A (SHOWN HERE) AND EFK-

1B/CERF-2; ARE PRODUCED BY ALTERNATIVE SPLICING.

SIMILARITY: BELONGS TO THE MHCK / EF-2 PROTEIN KINASE FAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C; Comment: The phosphoenolpyruvate--glycose phosphotransferase system (PTS) comprises tw. tors (II-A/II-B or III/II), lipid, and divalent cation. The phosphoryl group is transfer ubstrate as it crosses the cell membrane.

A;Title: Characterization of a gastrin releasing peptide from pon A;Reference number: A01562; MUID:80042433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   oţ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Molecule type: protein
A;Residues: 1-10 <LEM>
A;Note: this neuropeptide was purified from secretory granules
C;Superfamily: gastrin-releasing peptide
C;Keywords: adrenal gland; neuropeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  pp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          qq
Peptides 11, 299-304, 1990
A;Title: Six novel tachykinin- and bombesin-related peptides from the skin of the Austra A;Feference number: A60409; MUID:90287814
A;Accession: A60409
A;Molecule type: protein
A;Residues: 1-13 < SIM>
C;Superfamily: unassigned animal peptides
C;Superfamily: unassigned carboxyl end; hormone; neuropeptide; pyroglutamic acid
F;1/Modified site: pyrrolidone carboxylic acid (Gln) #status experimental
F;13/Modified site: amidated carboxyl end (Met) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ranatensin precursor - northern leopard frog
C; Species: Rana pipiens (northern leopard frog)
C; Date: 30-Jun-1989 #sequence_revision 30-Jun-1989 #text_change 24-Sep-1999
C; Accession: B28945

                                                                                      The invention relates to a method of treating a patient suffering from cancer that comprises administering a chemotherapy agent conjugated to a peptide, or co-administering the agent and the peptide. The peptides can be selected from heparin binding domains of the thrombospondin protein. The method and compositions comprising the agent and the peptide are useful for treating a patient with drug resistant cancer, and for treating a patient with cancer to prevent drug resistance from occurring. Toxic chemotherapeutic agent can also be used, as peptide conjugation and co-administration can considerably reduce the toxicity of the agent and allow less composition to be administered due to increased efficacy. More effective treatment at lower doses is achieved by targeting the chemotherapy agents to the tumour cells. The present sequence represents bombesin/gastrin-releasing peptide receptor-recognising peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New non-cyclic analogues of mammalian gastrin releasing peptide and amphibian bombesin, used for cancer treatment eg small cell lung carcinoma, atherosclerosis and gastrointestinal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           C-terminal = ethylamide or amide.

The peptide has an active site and a binding site for binding to a target cell receptor, and has one of the following modifications:

(a) a deletion of a residue within the active site, and modification of a residue outside of the active site; and

(b) a replacement of 1 or 2 residues within the active site with a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mammalian gastrín releasing peptide; amphibian bombesin; cancer; therapeutic peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This peptide is a specifically claimed example of a generic formula. The C-terminal amino acid (Met) of the naturally occurring peptide has been converted to an amide and Phe 8 has been replaced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New linear peptide analogues of bombesin - modified to eliminate biological activity while retaining receptor affinity, for treating cancer, diabetes, etc.
synthetic amino acid.
On binding to its receptor, the analogue acts as a competition inhibitor of the naturally occurring peptide but due to the modifications, fails to exhibit the normal in vivo biological. The peptides are useful for the treatment of benign or malignant proliferation of tissues, eg cancers of the gastrointestinal tract, pancreatic cancer, colon cancer, lung cancer or breast cancer; for the treatment of atherosclerosis, and disorders or gastrointestinal tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The peptide is useful for treating benign or malignant tissurproliferation, artherosclerosis, gastrointestinal disorders and diabetes. They act as competitive inhibitors of natural peptidical since they bind to the cell receptors but have no biological

This peptide is one of 27 specific examples of a highly generatormula. The peptides are all analogues of either litorin; 10 amino acid C-terminal region of mammalian GRP, neuromedin B vor neuromedin C; or the 10 amino acid C-terminal region of amphibian bombesin. They act as at least partial agonists of the natural synthesis and can be cyclised.

See AAR14860-R14880 and AAR15035-R15040.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This peptide is a specifically claimed example of a generic formula. The C-terminal amino acid (Met) of the naturally occurring beptide has been converted to an amide and Phe 8 has been replaced by beta-Lou.

The peptide is useful for treating benign or malignant tissue prolliferation, artherosclerosis, gastrointessinal disorders and diabetes. They act as competitive inhibitors of natural peptides, since they bind to the cell receptors but have no biological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New linear peptide analogues of bombesin - modified to eliminate biological activity while retaining receptor affinity, for treating cancer, diabetes, etc.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The C-terminal is amidated. The peptide is an example of a highly generic formula for bombesin antagonists which are [psi8-9 pseudo] managed in antagonists which are [psi8-9 pseudo] conteg. D. or L-tryptophan or tryptophan analog 2,3,4,9-tetrahydro-1H-pyriado[3,4-b]-indol-3-carboxylic acid (Tpi) at the N- and/or C-terminal.

The peptide is a bombesin/GRP (gastrin releasing peptide) antagonist and is useful for treatment of states of hypergastrinemia, e.g. pernicious anaemia, chronic atrophic gastritis, Zollinger-Ellison syndrome and vitiligo, associated with diffuse hyperplasia of gastric enterochromaffin-like colls, and with an increased risk of developing multifocal gastric carcinoid tumours. The peptide can also be used to treat lung, colon and gastric cancers. Dosage is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       hypergastrinaemic states, such as pernicious anaemia and
Zollinger-Ellison syndrome and also used against lung and gastric

The C-terminal is amidated. The peptide is an example of a hority generic formula for bombesin antagonists which are [psi8-9 pseudo] nonapeptides contg. D- or L-tryptophan or tryptophan analog 2,3,4,9-terrahydro-1H-pyrido[3,4-b]-indol-3-carboxylic acid (1p1) at the N- and/or C-terminal.

The peptide is a bombesin/GRP (gastrin releasing peptide) antagonist and is useful for treatment of states of hypergastrinemia, e.q. pernicious anaemia, chronic atrophic gastritis, Zollinger-Ell: or syndrome and vitiligo, associated with diffuse hyperplasia of gastric enterochromaffin-like cells, and with an increased risk of developing multifocal gastric carcinoid tumours. The peptide can also be used to treat lung, colon and gastric cancers. Dosaque 1. 1000 mircrog/kg parenterally.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    iaps

The invention relates to a new composition which comprises: (i) the somatostatin analogue SOM2 AGGKNFFGWKTPTSGC (3-14 disulphide tuidge) and (ii) at least 4 of the peptides: antagonist of vasoactive intestinal peptide (VIP1); VIP receptor binding inhibitor (VIL2); VII receptor antagonist (VIP3); somatostatin analogue (SOM1); bomtuesin antagonist (BOM1) and substance P antagonist (SPI). Also colained are more general compositions containing peptide analogues of somatostatin. VIP, bombesin and substance P. The compositions are used in human or veterinary medicine: (a) to xill (or inhibit multiplication of) tumour or cancer cells, particularly for treatment of leukaemia, lymphoma, adenocarcinoma of stomach, pancreas or prostate, or cancer (1 ung, breast, kidney or particularly rectum and colon, and (b) to (ent, inhibit or modulate over-expression of, eg. VIP. A wide rand, of cancells express receptors for VIP, somatostatin, bombesin and/or substa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Vasoactive intestinal peptide; VIP; antagonist; somatostaten, tabesin; Substance P; cancer; inhibition.

Asn, Glu, Gln, p-X-Phe, Trp, Cys, Met, Pro, Hypro or cyclohexylAla; V OR5 or NR6R7; R3, R5, R6, R7 = H, lower alkyl, phenyl(lower alkyl); or naphthyl(lower alkyl); R1, R2 = H, 112C alkyl, 7-10C phenylalkyl or COE1; Where R1 and R2 are bonded to the N-terminal amino acid of the peptide; E1 = 1-20C alkyl, 3-20C alkenyl, 3-20C alkynyl, Ph, naphthyl or 7-10C phenylalkyl; provided that when 1 of R1 and R2 is COE1, the other must be H. The peptides can be used for treating benign or malignant proliferation of tissue e.g. small-cell lung carcinemic, atherosclerosis, gastrointestinal disorders, and diabetes or diabetes analogues used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  oup '(:..

at least four analogues chosen from vasoactive intestinal peptide (VIP) I (a VIP antagonist), VIP2 (a VIP receptor binding inhibitor), VIP3 (a VIP receptor antagonist), WIP3 (a VIP receptor antagonist), The combination of these 7 analogues is known as MuJ-7. MuJ-7 is used as an anticancer drug to restrict tumour growth and spread by inhibiting tumour angiogenesis. MuJ-7, in addition, inhibits metastasis through its antianglogenic activity in all cancers. The peptides are useful for the treatment and prevention of angiogenesis, especially as a result of adenocarcinomas of the colon, breast, lung, prostate, kidney, leukemias or lymphomas.
                                                                                                                                                                                                                                                                                                                        AA;

Monitoring therapeutic gene transfer and expression into a subject, by administering vector encoding the gene and gene for membrane expressed targeting molecule, and a radiolabeled ligand, and imaging gene transfer

Example 10; Page 33; 107pp; English.

The present invention relates to a method for monitoring therapeutic gene transfer and expression into a subject, comprising administering a vector encoding a therapeutic gene and a gene for a membrane expressed targeting molecule (TM), and a radiolabelled ligand (RL) having high affinity for TM, and detecting the binding of RL with TM. The binding is directly proportional to the transfer and expression of the therapeutic gene. Preferably, the TM is gastrin releasing peptide receptor (GRPI). A technique was developed to image GRPI expression using a 99m^TC-labelled bombesin (BBN) analogue (the present sequence).

The peptide has an active site and a binding site for binding to a target cell receptor, and has one of the following modifications:

(a) a deletion of a residue within the active site and a modification of a residue within the active site; and confirmation of a residue within the active site; and confirmation of a residue within the active site with a synthetic amino acid.

(b) a replacement of 1 or 2 residues within the active site with a confirmation of the naturally occurring peptide but due to the modifications, fails to exhibit the normal in vivo biological active proliferation of tissues, eg cancers of the gastrointestinal tract, pancreatic cancer, colon cancer, lung cancer or bream.

C ancer; for the treatment of atherosclerosis; and disorders of the gastrointestinal tissues.

C this peptide is a claimed example of a highly generic formula.

(b) a replacement of 1 or 2 residues within the active site with a
synthetic amino acid.

(b) binding to its receptor, the analogue acts as a competitive
inhibitor of the naturally occurring peptide but due to the
modifications, fails to exhibit the normal in vivo biological activity.

The peptides are useful for the treatment of benign or malignant
proliferation of tissues, eg cancers of the gastrointestinal
tract, pancreatic cancer, colon cancer, lung cancer or breast
cancer; for the treatment of atherosciensis; and disorders of the
gastrointestinal tissues.

The peptides are useful for the treatment of benign or malignant proliferation of tissues, eg cancers of the gastrointestinal tract, pancreatic cancer, colon cancer, lung cancer or breast cancer; for the treatment of atherosclerosis; and disorders or the agastrointestinal tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 aps.
New non-cyclic analogues of mammalian gastrin releasing peptide - and amphibian bombesin, used for cancer treatment eg small cell lung carcinoma, atherosclerosis and gastrointestinal disorders.

"There are three distinct forms of bombesin. Identification of
[Leu13]bombesin, [Phe13]bombesin, and [Ser3,Arg10,Phe13]bombesin in
Eukaryota, Viridiplantae, Embryophyta, Tracheophyta, Spermatophyta,
Magnoliophyta; eudicotyledons, core eudicots, Rosidae, eurosids II;
Brassicales, Brassicaceae, Arabidopsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;
